

# The Problem: You're Paying for Water + Air

## Key Issues

- Utility meters register air as water.
- Over-pressurized supply increases unnecessary usage.
- Municipal infrastructure inefficiencies cost you more.

# 3-In-1 Technology Saves You Money

## Proof is in the Science

### Product Features

#### Air & Gas Compression

Reduces air in pipes before it hits the meter — so you only pay for water.

#### Flow & Pressure Regulator

Cuts water use by 3–6% and extends plumbing life by reducing pressure.

#### Check Valve

Stops water hammering, ensures one-way flow, and protects your system.

# Water Efficiency & Sustainability for Commercial Markets

Discover how AquaFlow can help you reduce water usage and utility costs while meeting ESG goals.

# Water Scarcity is Real. Let's Make Every Drop Count.

More than 2.7 billion people worldwide are expected to lack access to safe drinking water by 2029. Only 1% of the Earth's surface is suitable for drinking water – and this is increasingly at risk from pollution. The rest is undrinkable salt water (97%) and glacier ice (2%).

## ESG & SUSTAINABILITY

Companies today are prioritizing Environmental, Social, and Governance (ESG) strategies & sustainability initiatives. The AquaFlow Valve helps you meet these goals by significantly reducing water usage.

## AquaFlow Smart Solution

### The Technology Behind the AquaFlow System

Our newest innovation, refined over 15 years of extensive research and development. This cutting-edge device seamlessly integrates into your existing waterline, just after the meter. Optimizing water flow and reducing waste.

Reducing consumption up to 6% monthly, cutting waste without affecting performance – and protecting your system with a smoother flow downstream.

## Stop Paying For Air And Only Pay For Water

Aging infrastructure allows air into water lines. Meters can't tell the difference – so you're charged for air + water.

The AquaFlow Valve compresses the air before it reaches the meter, so you only pay for real water use. It also increases meter accuracy, stabilizes pressure, lowers consumption, and extends plumbing life – all with a simple and easy install.

## Vertical Markets Served

AquaFlow provides water saving & efficiency solutions tailored to various industries:

### Target Markets

Hotels & Resorts – Apartment Complexes – Grocery Stores – Educational Institutions (Schools & Universities) – Factories & Industrial Facilities

Our patented valve dynamically regulates pressure to match each property's specific water environment, helping all sectors cut waste and costs.

## Who Benefits from the AquaFlow Valve

The AquaFlow Valve is perfect for hotels, apartments, offices, factories, schools, and municipalities – anywhere water efficiency and billing accuracy matters. It lowers utility costs, boosts conservation, and reduces equipment wear. Easy to install in most cases under 1 hour.

## Average Savings
